CASE STUDY MID SUSSEX DISTRICT COUNCIL

Construction / Refurbishment / Local Authority / Live Environment

KEY INFORMATION

PROJECT VALUE
£600k

START DATE
June 2020

COMPLETION DATE
February 2021

CONTRACT TYPE
JCT Intermediate Building Contract 2016

Mid Sussex District Council | Lift Installation at Office Complex

Objective

Mid Sussex District Council were looking to improve accessibility within their main office complex in Haywards Heath for both staff and visitors. Following extensive surveys, it was concluded that a new lift would be the best method of achieving this. After participating in a competitive tender process, Mountjoy was awarded the contract to build the lift shaft and carry out associated works.

Solution

The project involved the construction of a new lift shaft and minor refurbishment works throughout the Council chambers. These works were spread across the basement through to the first floor and involved various structural alterations in order to accommodate the changes and the addition of the lift.

Health and safety was a key consideration during the project as the building was occupied by Council staff and visiting members of the public.

This is the second project Mountjoy has completed at the Oaklands complex – in 2017, we carried out external envelope repairs to the building including flat and pitch roofing renewal, replacement of Pvcu windows/doors and structural masonry repairs.
